Full Infrastructure Report

Environment: demo-clean-2026 | Account 153758413928 | Region us-east-1 | Seed 2026

Generated 2026-10-16T14:54:12.653726 UTC | Simulated time 2026-10-04T00:00:00

Security

Security score: 88 / 100. Open findings by severity: {'LOW': 0, 'HIGH': 2, 'MEDIUM': 2, 'CRITICAL': 0}.

Severity	Rule	Resource	Finding	First seen (sim)
HIGH	IAM-001	role:deploy-role	deploy-role has unapproved administrator access	2026-10-04
HIGH	IAM-005	role:deploy-role	4 identities can escalate to deploy-role	2026-10-04
MEDIUM	COST-001	account	Daily cost jumped 26% above baseline	2026-10-04
MEDIUM	IAM-006	account	3 principals have full administrator access	2026-10-04

Resolved findings (kept for history)

Severity	Rule	Resource	Resolution	Resolved (sim)
HIGH	NET-001	i-67761eb37ec789245	REMEDIATED	2026-10-01

Compliance posture

Check	Compliant	Total	%	Status
Storage encrypted at rest (EBS, S3, RDS)	36	36	100.0	PASS
Production volumes and databases have backups	13	13	100.0	PASS
Console users have MFA	5	5	100.0	PASS
No publicly accessible S3 buckets	6	6	100.0	PASS
No SSH/RDP/all-port exposure from the internet	22	22	100.0	PASS
Resources carry required tags (owner, environment)	55	55	100.0	PASS
No unapproved wildcard administrators	9	10	90.0	FAIL

Cost

Projected monthly run-rate: $4,885.94 (simulated). Last 30 days billed: $3,888.06. Simulated prices from the environment's price list - not live AWS prices. A month is 30 days.

Estimated monthly savings from open recommendations: $50.70 (ESTIMATED). Savings verified after applying changes in the simulator: $25.00 (VERIFIED, simulated).

Service	Monthly run-rate (USD)
S3	302.86
EBS	200.80
EC2	3,272.98
RDS	716.90
Snapshots	76.63
Elastic IP	7.20
Data Transfer	264.65
Load Balancing	43.92

Assumptions and limitations

- All resources, metrics and prices come from the CloudShield Fake AWS simulator; no real AWS account was accessed.

- Prices are simulated and a month is 30 days. Savings marked ESTIMATED are projections; only items marked VERIFIED were confirmed by re-running the analysis after a change in the simulated environment.

- Detection covers the documented CloudShield rule set and does not claim to find every real-world weakness.

- Network exposure is a simplified reachability model (security groups, public addresses, routes, internet gateways).
